

Ruben Anidjar

Graduated from the French Scientific Baccalaureate and a FULL STACK developer training, I am specialized in PHP, MySQL as well as HTML, CSS, JS which I master perfectly.

About me

Having followed all the elementary courses until high school, I obtained the French scientific baccalaureate with a specialty in Life and Earth Sciences. Following this, I studied in a Yeshiva for two consecutive years in France. I then decided to turn to an accelerated FULL STACK web developer training at the WebSchool in Jerusalem in one year. I thus obtained my diploma thanks to my final project: a website with a client part that allows you to connect and manage your account, as well as a backoffice part for the administrator. I coded this site in HTML, CSS and JAVA-SCRIPT for the front-end, and in PHP, MySQL for back-end and database. I thus perfectly acquired all the knowledge of database management and optimization of the code in order to achieve the best result. This gave me the necessary elements to develop sites for clients. I was then able to set up my micro-enterprise ANIDJAR-CREATION in which I sold sites (see below). I was recently hired by a company as a developer to create a complete CMS.

WORK

Kimi Tsion

PHP Developer • May 2022 - Present

I got hired into my first office as a web developer. My mission is to develop a CMS for real estate agencies. I am alone and I develop everything in PHP and MySQL from a template that has been purchased. I had to optimize very long pages of code into multiple pages by separating Models, Views and the Controller. In addition, I had to use many JavaScript libraries.

ANIDJAR CREATION

Website design and development • January 2022

I created a micro-enterprise in France. I had a few clients, which allowed me to develop my designer side. I created 2 showcase sites for associations, a site of leads for training in France in which I wrote an optimized code for referencing according to the rules of SEO. So I created a SEO campaign on Google Adsense. I have researched a lot on this subject.

Heikhal Chelomo

Website Developer • September 2021

The Heikhal Chelomo association located in France asked me to design a website for them with 3 sections. The first allowed to make a reservation on a choice of articles, the second allowed to make a donation to the association and the third to rent a reception hall. I had to learn to use a calendar, integrate Stripe for the means of payment, and create an automatic sending of emails with PHP.

EDUCATION

Fast and efficient training

FULL STACK graduate at Webschool • September 2020

I decided to find one of my passions by choosing this training which allows both to master the basics of web development in a few months, as well as discover the world of code that surprised me so much. In this training, I discovered passionate and resourceful teachers who made me understand how a good developer must design his code. I learned a lot and I was not satisfied enough. I thus obtained the diploma with a mark of 87/100 thanks to my final project carried out in 2 months. I have developed a site that allows anyone who wants to rent out their own car as well as to rent one. To this was added a back office for the manager of the site allowing to manage all the parameters of the site.

A yeshiva with a frantic pace

Yeshivat Torat Chaim of Rav Frech • September 2018 - August 2020

After high school, I wanted to get involved in Torah. I decided to go to the yeshiva Torat Haim in the Paris region where I learned a lot about the study of the Talmud. The study hours are very dense: from 8am to 11pm. So I learned to expand my brain to many different cases and versions, as well as to acquire seriousness and punctuality.

High-level French high school

Graduated from Ner Hatorah High School • July 2018

I obtained my scientific French baccalaureate with a specialty in Science and Life of the Earth. It is a school with a fairly high level, with 100% success in the baccalaureate for 15 years. The rhythm is very strong for a teenager: from 7:30 a.m. to 1:30 p.m. there are Kodesh subjects, and from 2 p.m. to 6:30 p.m. Hol subjects. I learned how to work quickly and efficiently.

SKILLS

Thanks to the experience I have acquired, I have a perfect command of HTML5. The CSS is also mastered, for the small animation details etc... it would take a little that I document myself if necessary. For Java-Script, I use it a lot on all my projects and generally, I use JQuery to save time. PHP is the Back-End language that I have always used, as well as MySQL for the database. The adobe suite is very complete, I have already used most of these software a lot and I would like to deepen my knowledge.
